

Rapid Response to Risk

Navigating and Mitigating Risks in Emergency Care

March 16, 2025 / Madison Edwards

Presenter

Madison Edwards, MSN, RN
Executive Vice President Clinical Risk Services
OmniSure Consulting Group

Objectives

- Gain insight into delegation and scope of practice.
- Understand the role of the Board of Nursing and the licensure investigations process.
- Define defensive documentation and learn techniques to enhance your documentation.
- Explore everyday risk management and patient safety strategies that can enrich and bulletproof your practice.

Scope of Practice

Defined by:

Education and
Licensure

Acts

Rules

Professional
Standards

Competence
and Experience

Statutes = Laws

Administrative Code = Rules

Laws written and passed by the legislature (NPAs).

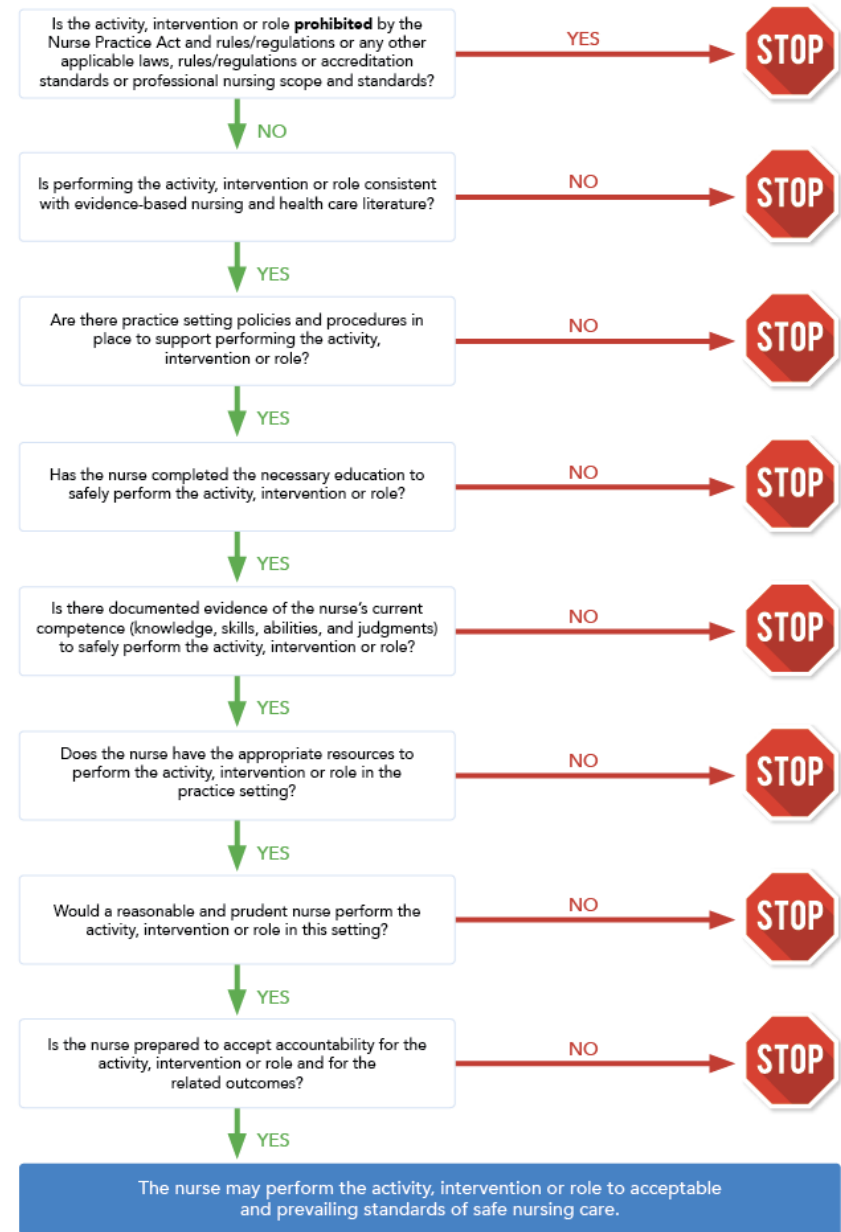

Written by a state agency under their statutory authority (Rules).

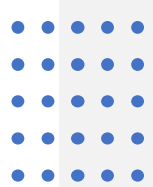

Guidelines, Practice
Policies, Position
Statements, and
Declaratory Rulings

The Decision-Making Model

Scope of Practice is
Your Personal Scope of Practice

Practicing Outside Your Scope of Practice

Patient harm

Professional consequences

Disciplinary action

Malpractice

Delegation

Managing the multidisciplinary team

The image features three overlapping adhesive bandages (Band-Aids) arranged in an 'X' pattern against a white background. The bandages are a light tan color with a grid of small white dots. The text 'Delegation Gone Wrong' is centered over the intersection of the bandages.

**Delegation Gone
Wrong**

Investigations

Who reports
or files a
complaint?

Members of the public

Employers

Other licensees

Investigative Process

Complaint filed

Review of complaint

Investigation

Board proceedings

Board action

Reporting and enforcement

A Licensing Board Investigation

This information is **JURISDICTION SENSITIVE**

What do they mean by
licensing actions and
discipline?

Why are nurses disciplined?

Substance
abuse

Outside of
scope

Negligence or
incompetence

Criminal
convictions

Boundary
violations

HIPAA
violations

Failure to
follow nursing
standards

Unprofessional
conduct

Protect Yourself From Litigation: Defensive Documentation

Defensive Documentation VS. Being Defensive

“pt refuses”

- Patient has declined to
- Patient opted to proceed with
- Patient has expressed preference for
- Patient has decided against ___ at this time

“c/o”

- “Complains” is fine!
- Make sure it is pertinent

“pt is non-compliant”

- “Non-adherent to therapy”
- “pt has had difficulty tolerating”

“pt is obese”

- “patient is experiencing obesity”
- “pt is in the obese range”
- Document the BMI

“pt is disheveled”

- “shirt is untucked”

Use your note to provide clarity to the patient, direct it to them

Avoid abbreviations where possible

Document in the open

- Turn computer to patient
- Dictate in the room

Encourage communication

- Educate and leverage support persons

More Strategies for Open Notes

This

OR

That

More Strategies for Open Notes

Defensive Documentation

Referrals

Noncompliance

Informed Consent

Informed Declination

Defensive Documentation: Informed Consent and Declination

Document:

Why treatment is needed

Risks, benefits, alternatives

Risks of not having treatment

Possible outcomes

Opportunity to ask questions before any procedures are performed.

Best Practice Recommendation: Utilization of peer review systems and communities for objective second opinions and case reviews

Prevent Lawsuits: Informed Consent and Declination

Implicit or verbal informed consent may apply for low-risk/simple procedures, exams, or assessments (i.e., radiographs and non-invasive diagnostics).

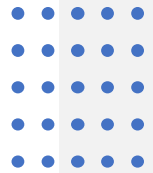

For more extensive treatment, a written informed consent form should be signed.

If a patient declines a treatment, procedure, or referral that is standard of care, the provider should document the informed consent conversations. Document elements of the conversation and witnesses present.

For declinations of care that can precipitate harm or deviate vastly from the standard of care, consider use of an informed declination document signed by the patient and placed in the medical record.

Common Documentation Errors

Illegible

Irrelevant

Subjective

Incomplete

Inconsistent

Communication is Key:
Never underestimate the power of rapport

THANK YOU!
